

**Role** - Junior Capabilities and Insights Analytics Analyst

**Team** - Quantum Black, AI by McKinsey

**Location** – Chennai

Do you want to work on complex and pressing challenges, the kind that bring together curious, ambitious, and determined leaders, who strive to become better every day? Do you want to be part of projects across sectors and create meaningful impact through analytics? If this sounds like you, you've come to the right place.

### **Your Impact**

As a Junior Capabilities and Insights Analytics (C&I-A) Analyst at QuantumBlack, you will work in multi-disciplinary environments harnessing data to provide real-world impact for organizations globally. You will influence many of the recommendations our clients need to positively change their businesses and enhance performance. You will experience the best environment to grow as a technologist and a leader. You will develop a sought-after perspective connecting technology and business value by working on real-life problems across a variety of industries and technical challenges to serve our clients on their changing needs. You will be surrounded by inspiring individuals as part of diverse and multidisciplinary teams. You will develop a holistic perspective of AI by partnering with the best design, technical, and business talent in the world as your team members. While we advocate for using the right tech for the right task, we often leverage the following technologies: Python, SQL, PySpark, Kedro, Tableau, KNIME and more

### **As a Junior C&I Analytics analyst, you will:**

- Solve the business problems with our clients in multiple industries worldwide while leading research and development of state-of-the-art analytical and automation models
- Play a key role in bringing the latest advances in business intelligence, data engineering, AI to our clients, collaborating with industry executives and QuantumBlack experts to find and execute opportunities to improve business performance using data and advanced analytical models
- Work with clients closely to understand the business needs and set up end to end analytical models to help them harness the power of data using business intelligence and analytical tools
- Work with QuantumBlack leadership and client executives to understand business problems and map them to state-of-the-art analytics and AI solutions
- Work closely with other data scientists, data engineers, machine learning engineers and designers to build end-to-end analytics solutions for our clients that drive real impact in the real world
- Perhaps most importantly, you will work in one of the most talented and diverse analytics teams in the world

### **Your Growth**

You will work with other data scientists, data/ML engineers, BI experts, designers, project managers and business subject matter experts on interdisciplinary projects across various industry sectors to enable business ambitions with data & analytics.

### **Who you are**

You are a highly collaborative individual who can lay aside your own agenda, listening to and learning from colleagues, challenging thoughtfully and prioritizing impact. You search for ways to improve

things and work collaboratively with colleagues. You believe in iterative change, experimenting with new approaches, learning and improving to move forward quickly.

### **Our Tech Stack**

While we advocate for using the right tools for the right task, we also consider client's current landscape and preferences. Often, we use Microsoft Fabric, Python, PySpark, Tableau, PowerBI, SQL, NoSQL databases and more.

### **Your qualifications and skills**

- Bachelor's level in Computer Science, Engineering, Applied Mathematics or related fields with an excellent academic record
- Knowledge/internship experience on Microsoft Fabric, Python and SQL; with good understanding of data structures, data processing & management
- Exposure to BI tools such as Tableau/PowerBI or no-code tools for data processing would be an advantage
- Programming expertise and ability to write clean, maintainable and robust code in Python, and SQL
- Knowledge in Engineering standards, QA/Risk Management
- Good presentation and communication skills, with a knack for explaining complex analytical concepts and insights to technical as well as non-technical audiences
- Willingness to travel to both domestic and international destinations
