

The FUTURE

is electric, and
Schneider Electric is shaping it.

Create your future with the digital transformation of energy management and automation. At Schneider Electric we offer graduate opportunities and internships.

About Schneider Electric

Schneider Electric is a global leader in energy technology, driving efficiency and sustainability through electrification, automation, and digitalization. With approximately 160,000 employees and a network of over one million partners across more than one hundred countries, Schneider Electric helps businesses, industries, data centers, infrastructure providers, and homes become more energy-efficient, resilient, and sustainable. The company offers innovative solutions spanning energy management, industrial automation, software, digital services, and AI-enabled technologies, enabling customers to optimize performance while accelerating their sustainability goals.

Important Information about the Schneider Electric University Program

Stipend & Compensation:

- **INR 9 LPA + 3 LPA Sign on Bonus for B. Tech for a Full-Time Role**
- **INR 9.5 LPA + 3 LPA Sign on Bonus of M. Tech for a Full-Time role**
- **35,000 INR per month stipend for Internship only role**
- **Job Location: Pan India**
- **This is an Indicative Job Description (JD) about our SD division. We request all the students to go through the same. The students should also be flexible and open to work in any of these Sub Departments if selected for Internship/ Full-Time role or Internship and Full Time Role**

1. Job Description- Graduate Engineer Trainee - EIT

The role combines technical exploration, AI solution development, business engagement, and change management. Help bridge the gap between AI technologies and business value by testing new capabilities, developing proofs of concept, and supporting enterprise-wide AI adoption.

1. **AI Innovation & Technical Exploration:** Identify AI opportunities to deploy into the e2e process fulfilling a business need, this includes analyzing workflows and pain points and benchmarking with emerging AI technologies. Then building prototypes and PoCs as needed.
2. **AI Agent & Copilot development:** Design/Support designing AI agents. While testing the accuracy and the business value of the agent.
3. **AI Adoption and teams' engagement:** Support AI deployment and track the adoption metrics of in-house AI tools (MS Copilot). Search for AI success stories to highlight and ensure teams engagements.
4. **Governance & Responsible AI:** Follow and promote for responsible AI principles. Document use cases and maintain an AI tool asset inventory.

2. Job Description- Graduate Engineer Trainee - Global Technology Services

Role Purpose

The Graduate Engineer Trainee (GET) will gain hands-on experience across Infrastructure Services, Cloud Platforms, Infrastructure Security, Data Platforms, and Digital Workplace technologies. The role focuses on supporting enterprise operations, cybersecurity, AI-driven automation, cloud modernization, and digital transformation initiatives while developing future technology leaders for Global Technology Services.

Key Responsibilities

- Support enterprise infrastructure including cloud platforms, servers, networks & connectivity, endpoint management, digital workplace technologies, and data analytics platforms.
- Assist with infrastructure security operations, including Palo Alto firewalls, cloud security controls, SentinelOne endpoint protection, network security monitoring, vulnerability management, identity and access management, and security compliance initiatives.
- Participate in infrastructure monitoring, incident management, root cause analysis, and service reliability improvement activities using AI.
- Identify opportunities to leverage AI, Generative AI, Machine Learning, and automation across infrastructure, cybersecurity, service management, and data platform operations.
- Support adoption of AIOps capabilities including anomaly detection, event correlation, predictive analytics, intelligent alerting, and automated remediation under the umbrella of Problem Management.
- Collaborate with Infrastructure, Cloud, Network, Security, Data Platforms, and Digital Workplace teams on transformation and modernization projects.
- Assist in deploying and governing all elements of Microsoft Copilot and work with Github Copilot for development activities.
- Support data platform operations, data quality monitoring, data lineage, platform observability and analytics and drive improvements with AI.
- Research emerging technologies in AI, cybersecurity, cloud computing, and data analytics and recommend innovative use cases.

Example College Project Areas

- AI-powered incident management and root cause analysis.
- Cloud Infrastructure and cybersecurity automation (AWS or GCP)
- Cloud security posture management and compliance automation.
- AI-based data quality monitoring and anomaly detection.
- Copilot Studio based agent build.

Desired Skills

- Fundamentals of Cloud (AWS, Azure, GCP), Networking, Operating Systems, and Infrastructure Services.
- Basic understanding of Cybersecurity, Firewalls, Endpoint Security, Cloud Security, IAM, and Zero Trust principles.
- Programming and scripting knowledge (Python, Java, JavaScript, PowerShell, or similar).
- SQL, databases, and data analytics fundamentals.
- Knowledge of DevOps, APIs, automation, and CI/CD concepts.
- Familiarity with modern AI tools such as Microsoft Copilot, GitHub Copilot, ChatGPT, Power Automate, and Copilot Studio.
- Understanding of prompt engineering, AI governance, and responsible AI practices.
- Strong analytical, problem-solving, communication, and collaboration skills.

Success Profile

A successful GET demonstrates curiosity, technical aptitude, security-first thinking, and a passion for leveraging AI in cloud, infrastructure, and data technologies to deliver secure, reliable, and innovative digital services.
