

Key Responsibilities

- * Support the design and development of power electronic circuits and subsystems.
- * Assist in schematic capture and PCB design activities.
- * Perform circuit simulations using tools such as LTspice or equivalent.
- * Conduct laboratory testing, validation, and debugging of hardware prototypes.
- * Analyze waveforms using oscilloscopes, power analyzers, and other test equipment.
- * Assist in component selection, BOM preparation, and alternate component evaluation.
- * Prepare technical reports, test plans, and engineering documentation.
- * Participate in design reviews and technical discussions with the engineering team.
- * Support root-cause analysis and troubleshooting activities during product development.

Required Qualifications

- * B.Tech/B.E. in Electrical Engineering, Electronics Engineering, Electrical & Electronics Engineering
- * Strong academic background in Power Electronics and Analog Electronics.
- * Good understanding of:
 - * Power Electronic Converters (Buck, Boost, Flyback, Forward, LLC, etc.)
 - * MOSFETs, IGBTs, Diodes, and Magnetics
 - * Analog and Digital Electronics
 - * Circuit Analysis and Electrical Measurements
- * Basic understanding of PCB design concepts and schematic reading.

Preferred Skills

- * Exposure to LTspice, PSpice, MATLAB/Simulink, Altium Designer, KiCad, or similar tools.
- * Familiarity with laboratory instruments such as:
 - * Oscilloscope
 - * Multimeter
 - * Function Generator
 - * DC Power Supply
 - * Power Analyzer
- * Experience with academic or personal projects related to Power Electronics Application.
