

We are Growing!!

Role : Analyst

#BeyondPossible

Our Locations

Hyderabad, Chennai, Gurugram, Pune, Kolkata, Bangalore

Tredence is a global analytics services company providing business solutions across industry verticals, including Manufacturing, Supply Chain, Retail & CPG, Life Sciences, Energy & Utilities, and Engineering & Construction. For three consecutive years, we have been recognized as one of the fastest-growing private companies in the country by the Inc. 5000. We distinguish ourselves by attracting top talent in data analytics and data science. Our unique, academy-driven, structured learning and development programs foster disruptive skills in-house, blending technology and business analytics effectively.

We leverage the “Tredence Studio” to co-innovate with our customers, offering on-the-job experiential learning to train new talent and future leaders. Our sustainable, white-box solutions are built using scalable data engineering platforms, machine learning frameworks, and other proprietary accelerators, which we transition to our clients at the end of engagements. Our ROI assurance framework and “Think Impact” core values drive our continuous curiosity and commitment to value creation for our customers.

Our global delivery methodology and agile execution models enable us to deliver cost-effective solutions, leveraging our ecosystem of partners and clients' existing technology and data assets securely. Our expertise in AI and data analytics addresses challenges across industries, optimizing supply chains, improving customer experiences, driving operational efficiencies, and enabling predictive analytics. By integrating Generative AI (Gen AI) and Large Language Models (LLMs), we solve cutting-edge business problems, enhance decision-making, automate complex processes, and unlock new growth and efficiency opportunities.

Compensation:

Your CTC will be INR 14.5 LPA

Roles & Responsibilities:

As an Associate Data Scientist, you will solve some of the most impactful business problems for our clients using various AI and ML technologies. You will collaborate with business partners and domain experts to design and develop innovative solutions to achieve predefined outcomes.

- Work with the team to define business requirements, come up with an analytical solution and deliver the solution with a specific focus on Big Picture to drive robustness of the solution
- Design & develop custom models based on an in-depth understanding of underlying data, data structures, and business problems to ensure deliverables meet client needs.
- Create interpretable and scalable models
- Present results, insights and recommendations to a larger business audience with an emphasis on the “now what”, i.e. business impact
- Participate in executive presentations with client leadership stakeholders.
- Be part of an inclusive and open environment. A culture where making mistakes and learning from them is part of life
- See how your work contributes to building an organization and be able to drive Org level initiatives that will challenge and grow your capabilities.

Qualification:

- MTech or BE/BTech from a reputed University

Required skills & interest areas:

- Excellent programming skills in Python/R. Strong working knowledge of numerical, data analysis, AI/ML frameworks and libraries such as NumPy, Pandas, Scikit-learn etc.
- Advanced SQL skills.
- Strong understanding of the fundamental concepts of Statistical Modelling & Algorithms E.g. Hypothesis testing, Sample size estimation, A/B testing
- Exposure to GenAI concepts and agent-based systems, along with an interest in applying them to real-world problems
- Knowledge of predictive/prescriptive analytics including Machine Learning algorithms (Supervised and Unsupervised) and deep learning algorithms. Expertise in ML – Regression, Classification, Clustering, Time Series Modeling, Graph Network, Recommender System, Deep Learning, Computer Vision, NLP/NLU, Reinforcement learning
- Proficient in some or all the following techniques: Linear & Logistic Regression, Decision Trees, Random Forests, K-Nearest Neighbors, Support Vector Machines, ANOVA, Principal Component Analysis, Gradient Boosted Trees, ANN, CNN, RNN, Transformers.
- Ability to solve complex business problems through a blend of logical and creative thinking.
- Strong communication skills with an excellent ability to synthesize complex information.
- A collaborative mindset to work with clients, ecosystem, and internal teams

Why joinTredence?

There is a reason we are one of the fastest-growing private companies in the country! You will have the opportunity to work with some of the smartest and fun-loving people in the data analytics space. You will work with the latest technologies and interface directly with the key decision stakeholders at our reputed clients, some of the largest and most innovative global business brands.

Our people are our greatest asset, and we value every one of them. We are an equal opportunity employer who adhere to our core values & reflect this in our day-to-day life. So, please come & see why we're so successful in one of the most competitive and fastest growing industries in the world.
