

Role: Software Development Engineer 1 (SDE 1)**Location:** Chennai, India | **Experience:** 0 to 3 Years | **Job Type:** Full-time | **Function:** Software Development

Ramco conglomerate

Ramco Systems is part of the \$3 billion+ diversified **Ramco Group**, a legacy enterprise with deep roots in industries such as cement, textiles, engineering, software, energy, and biotech. With over 75 years of heritage and innovation, the Ramco Group is a global powerhouse that blends traditional business values with modern technologies.

Ramco Systems is the Group's technology arm, delivering **next-gen enterprise software** across **Global Payroll, HR, Aviation MRO, ERP, and Logistics**. Headquartered in Chennai, India, Ramco serves over 1,000 customers across 35+ countries and is recognized for its **AI/ML-based, bot-enabled, and cloud-native** solutions.

Our platform is designed for digital operations—trusted by governments, Fortune 500 companies, and high-growth enterprises alike.

If you're looking to be part of a company that combines innovation, global exposure, and a mission to disrupt legacy systems with intelligent enterprise applications—**Ramco is the place to be.**

Key Responsibilities

- Write clean, efficient, and maintainable code.
- Assist in designing, implementing, testing, and deploying software applications.
- Apply object-oriented design principles and patterns effectively.
- Work across databases, APIs, and both frontend and backend services to support application functionality.
- Follow software engineering best practices including automated unit testing, version control, and peer code reviews.
- Debug and troubleshoot issues related to functional and non-functional requirements (NFRs).
- Collaborate with team members to develop and maintain scalable, secure, and reliable solutions.
- Participate in agile development sprints and contribute actively to team discussions and stand-ups.

Required Skills & Experience

- Proficiency in at least one programming language (Java, Python, C#, or C++), one scripting language, and one frontend framework (e.g., JavaScript/React/Angular).
- Strong understanding of object-oriented design, data structures, and algorithms.
- Experience in writing clean, well-documented code with unit test coverage.
- Familiarity with relational or NoSQL databases and ability to write basic queries.
- Experience using version control systems like Git.
- Ability to debug, analyze complexity, and optimize performance.
- A user-first mindset: ability to design functional and intuitive interfaces.

Preferred Qualifications

- Familiarity with cloud platforms (AWS, Azure, or Google Cloud) is a plus.
- Understanding of RESTful APIs, gRPC protocols and microservices architecture.
- Basic knowledge of DevOps practices (CI/CD, Docker, Kubernetes) is an advantage.
- Exposure to event-driven systems (Kafka, RabbitMQ) or AI concepts is a plus.
