

IS&T SDET Intern

Summary:

The Information Systems & Technology (IS&T) organization produces key business and technical infrastructure at Apple — handling orders from the online store, creating applications that enhance the retail store experience, providing network bandwidth for our services around the world, processing every transaction in iTunes and closing the books. IS&T does it all. If you're a born problem solver who enjoys collaborating on the next big thing, we may just have your dream job.

Description:

- Apple's IS&T team is looking for highly motivated and talented engineers to build the next generation of software services that power several mission critical applications.
- We are looking for extraordinary individuals with strong communication and interpersonal skills and ability to work effectively across multiple business and technical teams.
- As a part of this dynamic team, you will build cutting edge software service, one that is continually innovating & is proud of making a difference and help us build the Apple experience on a global scale.
- You should be a self starter, motivated, with exceptional interpersonal skills as well as a positive and flexible approach to problems.
- Your ability to thrive in a fast-paced, tight delivery timeline is what we are looking for.

Minimum Qualifications:

- Graduating in 2027
- Belong to all circuit branches/have strong coding skills
- CGPA more than 7
- Btech students

Preferred Qualifications:

- Graduating in 2027
- Belong to all circuit branches/have strong coding skills
