

# Operations Program Manager, iPhone

**Location:** Bangalore, India

Imagine what you could do here. At Apple, new ideas quickly become amazing products and customer experiences. Bring your passion and hard work, and there's no limit to what you can achieve. The people at Apple don't just build products - they create innovations that have changed entire industries. It's the diversity of our people and their ideas that drives the innovation in everything we do, from cutting-edge technology to environmental responsibility.

Join Apple and help us make the world better. We're looking for an Operations Program Manager (OPM) Intern who will help manage and support all aspects of bringing new products to market within our iPhone Product Operations team in India. You'll work toward important goals: launching products on time, keeping costs down, maintaining high quality, ensuring products are available when customers need them, and speeding up delivery times.

## **Key Qualifications:**

The OPM helps launch products on time, with excellent quality and strong customer availability. OPMs are essential to developing and launching Apple's products successfully. A successful OPM is a leader and facilitator; is energetic, motivated, organized and detail-focused; is skilled at managing programs and solving problems; communicates well with everyone; works well in uncertain and ambiguous situations; and is good at getting things done and solving disagreements.

We also work across Apple's global Operations team and partner with product development teams and other departments within Apple.

- Think strategically and execute tactically - You understand the big picture while also getting hands-on work done.
- Attention to detail - You care about accuracy without getting lost in small details.
- Analytical thinking - You can analyse problems and find good solutions.
- Strong motivation to drive - You have energy and determination to complete any challenge.
- Work in uncertain situations - You can take charge and figure out what to do even when things aren't clear.
- Drive things that matter – Identify and prioritise things that are critical to meeting project milestones.
- Evidence of ownership - You've driven a project, club, competition team, or internship deliverable through to completion.
- Excellent communication skills - You express ideas clearly to diVerent audiences.
- Strong relationship building - You're skilled at creating teams across diVerent departments, working in a matrix structure, and influencing people eVectively.

**Job Description:**

As an Operations Program Manager Intern, you'll help manage the operational side of product development during new product launches and help manage production capacity for assigned products.

- Support and shadow factory operations planning - Work alongside Original Equipment Manufacturer (OEM) operations teams to help plan and execute production builds and new product launches.
- Prepare factories for production - Work with engineering, operations, and factory teams to make sure factories are ready to produce new products.
- Plan production capacity - Help identify how much factories can produce and guide input plan prioritization.
- Improve processes - Help influence how products are designed for easy manufacturing, testing, and quick delivery, while keeping costs low and quality high.
- Communicate across teams - Draft and prepare communications up and down the organization for review by the OPM owner; help highlight important issues and suggest solutions.
- Support new product launches - Help the Apple team manage new product launches within the Operations team. Work on important goals: solving problems, designing the supply chain, managing schedules, controlling costs, ensuring quality, maintaining availability, and speeding up delivery times.
- Work with manufacturing partners - Partner with OEM manufacturers to develop, launch, and introduce products. Build strong relationships and learn how factories work, what they can do, and what their limitations are.
- Collaborate with cross-functional teams - Work with team members from different departments across the world within Operations to create new product plans. These departments typically include: Worldwide Planning, Global Supply Managers, DFM, Technical Program Manager, Quality, Supplier Quality Engineer, and Test Engineer.
- Learn how Operations shapes design - Observe design and DFM reviews to build a working understanding of how Operations influences product design, supply chain decisions, testing methods, and product features.
- Organize resources - Identify and coordinate people and resources (Apple staff, factory staff, contractors, etc.) needed to meet project goals.
- Share project updates - Report project status to different teams, including your colleagues and leaders at Apple and factory partners. Take many different issues and explain them in a clear, simple, and focused way. Present information with confidence and brevity.
- Drive innovation and excellence - Always look for ways to improve Apple products and how we manage projects.
- Support other products - Help other products in the region when needed. Travel to other locations to solve problems and support production activities.

**Education:**

- Currently pursuing an Engineering Degree in any discipline (Mechanical, Electrical, Electronics, Civil, Industrial, Production, Computer Science, etc.)
