

Technical Operations Program Manager, iPhone: Intern Job Description

Location: Bangalore

Imagine what you could do here. At Apple, phenomenal ideas have a way of becoming great products, services, and customer experiences very quickly. Bring passion and dedication to your job and there's no telling what you could accomplish.

Description:

It takes deeply dedicated, intelligent and hard-working individuals to maintain and exceed the high expectations for the exciting iPhone brand at Apple.

- Drive contract manufacturer for technical preparation for pre-production builds.
- Production process development, documentation, optimization and validation.
- Development and implementation of new technologies to improve production quality, capacity and efficiency.
- Sets standard practices and independently settles impact to design approaches and parameters to the final product.
- Provides direction, mentorship and resources to other engineering groups and project leaders as well as factory technicians.
- Act as lead engineer on a variety of projects and participates in the project planning of major sub-projects.

Performs assignments in several of the following manufacturing engineering functions:

- **Design for Manufacturability:** Provide early and ongoing manufacturing involvement to ensure new products are mechanically manufacturable.
- **Product Engineering:** Works all phases of a product from concept to repeat manufacturing to end of life. Provides production support engineering with respect to technically complex testing methods, procedures and failure analysis.
- **Process Engineering:** Designs and develops technically complex processes to improve quality and efficiency.
- **Failure/Data Analysis:** Plans, develops and implements technically complex procedures for the testing and evaluation of soon to be released products.

Specifies test to be performed, compiles data and makes recommendations for product design changes and final assembly standards. This will include the use of Design of Experiments (DOE) and statistical analysis using Six Sigma principles.

Education:

BE/B.Tech/BS in a related Engineering discipline like Mechanical/Industrial/Manufacturing/Electrical/Electronics Engineering

Additional Requirements:

- Required to understand tolerance stack ups for assemblies and part level.
- Solid understanding of GD&T principles a plus
- JMP, Minitab & Six Sigma experience a plus.

The people here at Apple don't just create products — they create the kind of wonder that's revolutionized entire industries. It's the diversity of those people and their ideas that inspires the innovation that runs through everything we do, from amazing technology to industry-leading environmental efforts. Join Apple, and help us leave the world better than we found it.
